

## 3V Quad-Band GSM850/900 DCS/PCS Power Amplifier Module

### Description:

Advanced quad-band, compact 3V power amplifier module designed for mobile handset applications. The small size and high performance is achieved with high-reliability InGaP HBT technology. The module is fully integrated, providing a simple 50 Ohms interface on all input and output ports. No external matching or bias components are required. Despite its very compact size, the module has exceptional efficiency in both bands. Band select and power control inputs on the module are CMOS compatible.

### Features:

- **Very compact size** – 8.75x9.55x1.32mm<sup>3</sup>.
- **High efficiency** – typical GSM850 52%, E-GSM 58%, DCS 52% , PCS 50%
- **Positive supply voltage** 3.1 to 5.2 V.
- **50  $\Omega$  input and output impedances.**
- **GPRS class 12 compatible.**
- **CMOS band select and power control inputs.**
- **High-reliability InGaP technology.**
- **Ruggedness 10:1.**
- **Few external components.**
- **Very low input power levels**

### Description:

The module is built around a highly integrated dual power amplifier InGaP die. By virtue of advanced design techniques, exceptional performance is achieved with four stages in each amplifier. On-die interstage matching is employed using a high Q passives technology. Together these technologies allow an extremely compact size to be achieved with excellent electrical performance. The module includes a CMOS die to implement a band-select function and Internal Power Control, avoiding additional external components like directional coupler, detector diode and operational amplifier. The module construction is a low-profile overmolded land-grid array on laminate.

## Pin Out:

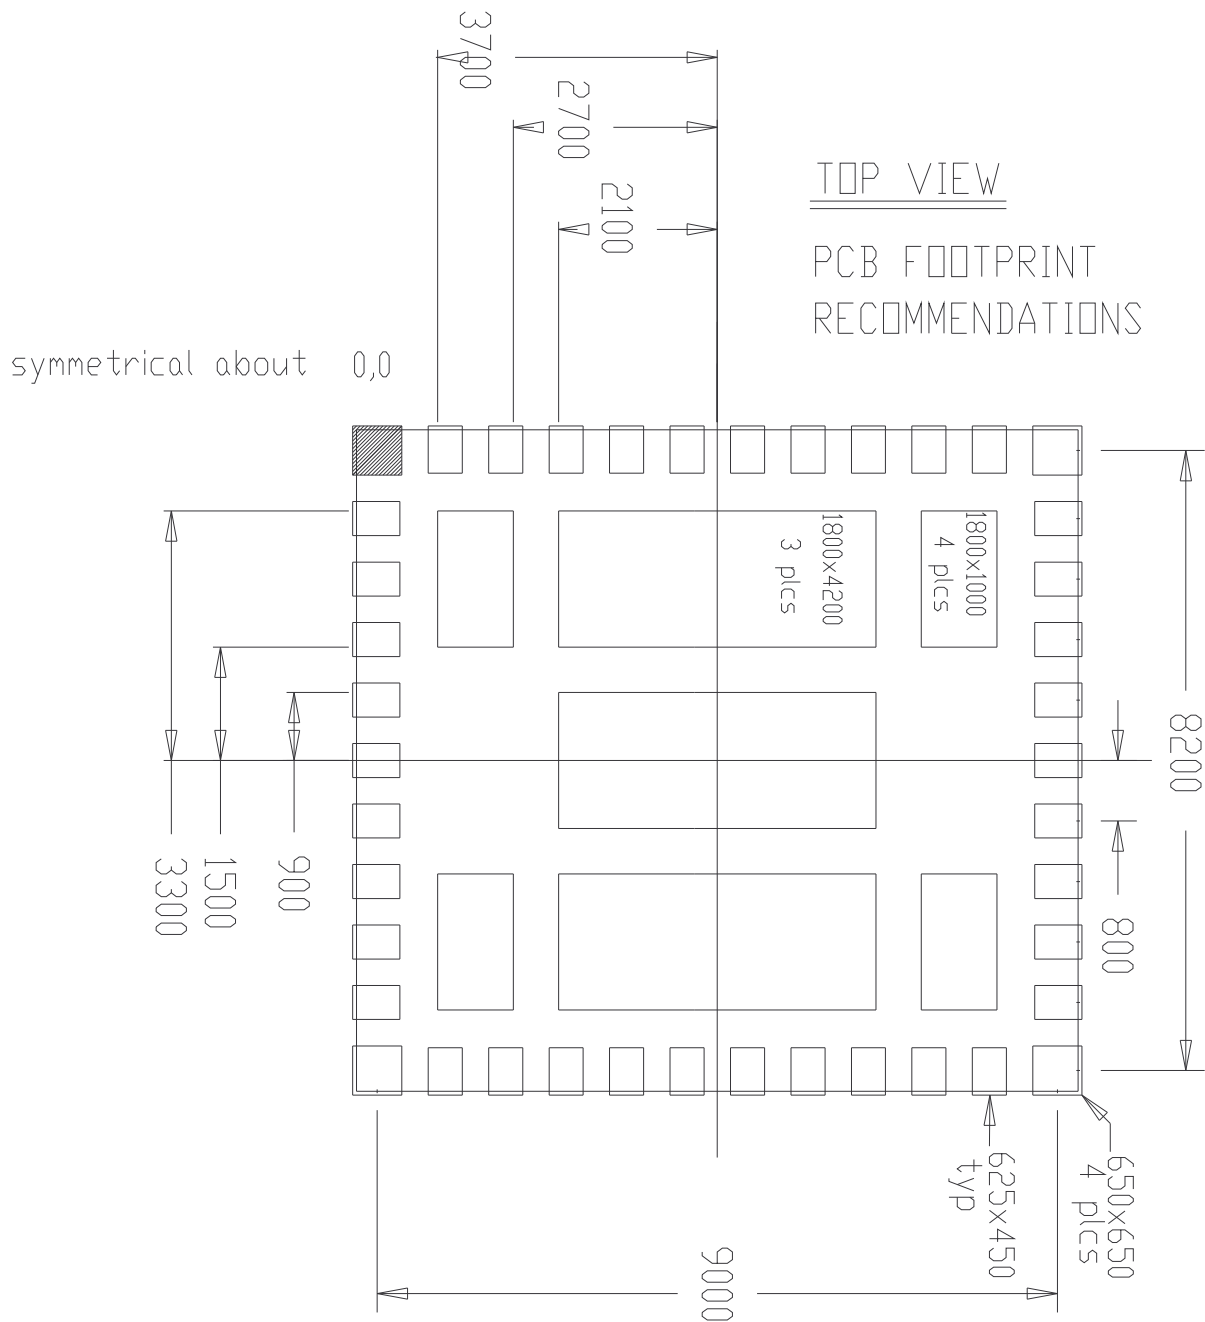

Pin #	Description	Function
1	RfIn_DCS	Matched DCS input
2	GND	Ground
3	VBS	Band Select Pin (Low -> GSM mode active; High -> DCS mode active)
4	Tx_Enable	Digital signal. When activated ( $V_{Tx\_Enable} = \text{high}$ ), the PA output power will jump to approx. -10dBm.
5 - 7	Vbatt	Battery supply voltage, typ. 3.1 – 4.2 V, approx. 1.6A
8	Vreg	Regulated voltage provided from the customer board (typ. 2.7V, < 10mA)
9	VRAMP	DAC Control Signal for output power setting, nominal 0.2 .. 1.7 V
10	GND	Ground
11	RfIn_GSM	Matched GSM input
12 - 15	GND	Ground
16	RfOut_GSM	Matched GSM output
17 - 18	GND	Ground
19	Vcc	Internal Voltage, for blocking reasons $C_{VCC} \leq 220\text{nF}$
20	GND	Ground
21	RfOut_DCS	Matched DCS output
22 - 32	GND	Ground
