Chip Assembly and Mechanical Data

Note : Supply feed should be capacitively bypassed. 25 μ m diameter gold wire is to be preferred.

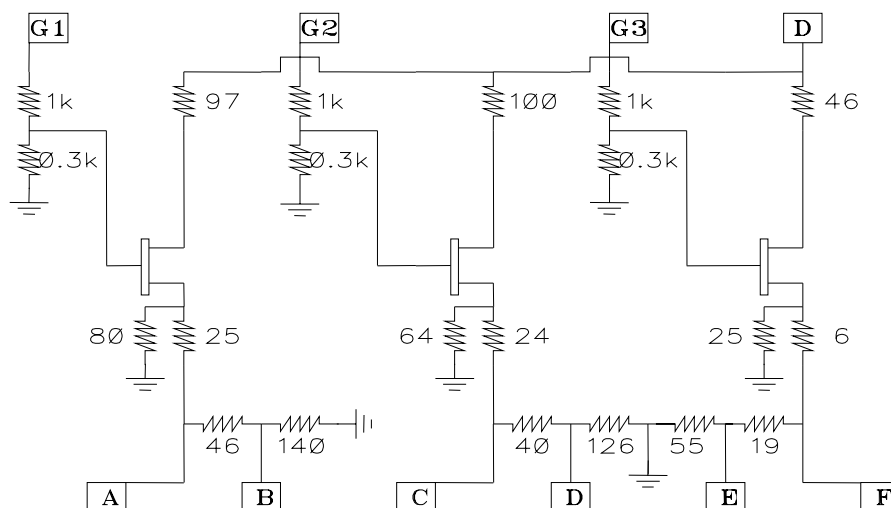

Bonding pad positions.

(All dimensions are in micrometers)

Chip Biasing options

This chip is self-biased, and flexibility is provided by the access to number of pads. the internal DC electrical schematic is given in order to use these pads in a safe way.

The two requirements are :

N°1 : Not exceed $V_{ds} = 3.5\text{V}$ (internal Drain to Source voltage).

N°2 : Not biased in such a way that V_{gs} becomes positive.

(internal Gate to Source voltage)

We propose two standard biasing :

Low Noise and low consumption :

$V_d = 4.5\text{V}$ and B, D, E grounded.

All the other pads non connected (NC).

$I_{dd} = 55\text{mA}$ & $P_{out-1dB} = 10\text{dBm}$ Typical.

(Equivalent to A,B,C,D,E F: non connected and $V_d=4.5\text{V}$; $G1=G2=G3=+1\text{V}$).

Low Noise and higher output power

$V_d = 4.5\text{V}$ and B, C, F grounded.

All the other pads non connected (NC).

$I_{dd} = 75\text{mA}$ & $P_{out-1dB} = 12\text{dBm}$ Typical..
