

9- 19GHz Buffer Splitter Amplifier

GaAs Monolithic Microwave IC

Description

The CHA2296 is a broadband buffer splitter three-stage monolithic amplifier.

It is designed for a wide range of applications, from military to commercial communication systems. The backside of the chip is both RF and DC grounds. This helps simplify the assembly process.

The circuit is manufactured with a PM-HEMT process, 0.25 μ m gate length, via holes through the substrate, air bridges and electron beam gate lithography.

It is available in chip form.

Typical on wafer measurements : Gain (dB)
