General Description

The Vaishali VT83205 is a single-chip, integrated VCXO and Phase Locked Loop (PLL) clock synthesizer. The device uses the VCXO and an analog Phase-Locked Loop (PLL) to accept a 10 MHz to 14.318 MHz, 30pF (pull range of 200 ppm) crystal input, in order to produce either one or two output clocks. A 0 to 3V control signal is used to fine tune the output clock frequency in the ± 100 ppm range. Select inputs S0:S2 are used for frequency and output selection.

Features

- 3.3V supply operation
- Packaged in 16-pin SOIC & QSOP packages.
- Replaces separate VCXO and multiplier
- Uses inexpensive pullable crystal
- On-chip VCXO with 200 ppm pull range (± 100 ppm)
- 5V-tolerant control inputs
- Zero ppm synthesis error in both clocks
