

Precision Quad SPDT Analog Switch

FEATURES

- $\pm 22\text{-V}$ Supply Voltage Range
- TTL and CMOS Compatible Logic
- Low On-Resistance ($25\ \Omega$)
- On-Resistance Matched Between Channels ($<2\ \Omega$)
- Flat On-Resistance Over Analog Signal Range ($\Delta <3\ \Omega$)
- Low Charge Injection ($1\ \text{pC}$)
- Low Leakage ($0.2\ \text{nA}$)
- Fast Switching ($175\ \text{ns}$)
- Single-Supply Operation ($5\ \text{V}$ to $40\ \text{V}$)
- ESD tolerance $>2\ \text{kV}$ per 3015.x
- Low Power ($<1\ \mu\text{A}$) – DG333A/333AL

BENEFITS

- Rail-to-Rail Analog Signal Range
- Simple Logic Interface
- High Precision and Accuracy
- Minimal Transients
- Low Distortion
- Reduced Power Consumption
- Improved Reliability
- Break-Before-Make Switching Action

APPLICATIONS

- Audio Switching
- Test Equipment
- Portable Instrumentation
- Communication Systems
- PBX, PABX
- Computer Peripherals
- Mass Storage Systems
- Switched-Capacitor Networks
- Battery-Powered Systems

DESCRIPTION

The DG333A/333AL consist of four independently controlled single-pole double-throw analog switches. These monolithic switch is designed to control analog signals with a high degree of accuracy. The DG333A/333AL minimize measurement errors by offering low on-resistance ($25\text{-}\Omega$ typ), low leakage (20-pA typ) and low charge injection performance. The DG333AL features micro-power operation ($<1\text{-}\mu\text{W}$ typ). This is ideal for battery operated systems. Pin 15 is not connected on the DG333A.

An improved charge injection compensation design minimizes switching transients. These switches can handle up to $\pm 22\text{-V}$ signals and have an improved continuous current of $30\ \text{mA}$.

The DG333A/333AL is fabricated in Vishay Siliconix's proprietary HVSG-2 CMOS process, resulting in higher speed and lower power consumption. An epitaxial layer prevents latchup. Each switch conducts equally well in both directions when on. When off, they block voltages up to the power-supply levels.

Notes:

- Room = 25°C, Full = as determined by the operating temperature suffix.
- The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
- Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
- Guaranteed by design, not subject to production test.
- V_{IN} = input voltage to perform proper function.
- On-resistance match and flatness are guaranteed only for bipolar supply operation.

APPLICATIONS

Band-Pass Switched Capacitor Filter

Single-pole double-throw switches are a common element for switched capacitor networks and filters. The fast switching times and low leakage of the DG333A/333AL allow for higher

clock rates and consequently higher filter operating frequencies. Figure 8 shows two capacitors being switched. The DG333A/333AL is capable of switching four capacitors.
