## Description

The ZILOG ZHX1810 is a low-profile version of ZiLOG's popular ZHX1010 1-meter transceiver. The transceiver is mechanically enhanced for ultra compact, power-conscious portable products, such as mobile phones, portable printers, handheld computers, and personal data assistants (PDAs). Designed to operate using the IrDA-Data mode, the transceiver combines an infrared emitting diode (IRED) emitter, a PIN photodiode detector, a digital AC coupled LED driver, and a receiver/decoder in a single package.

The ZILOG ZHX1810 provides an efficient implementation of the SIR standard in a small-outline footprint format. Application circuit space is also minimized, as only three components are required.

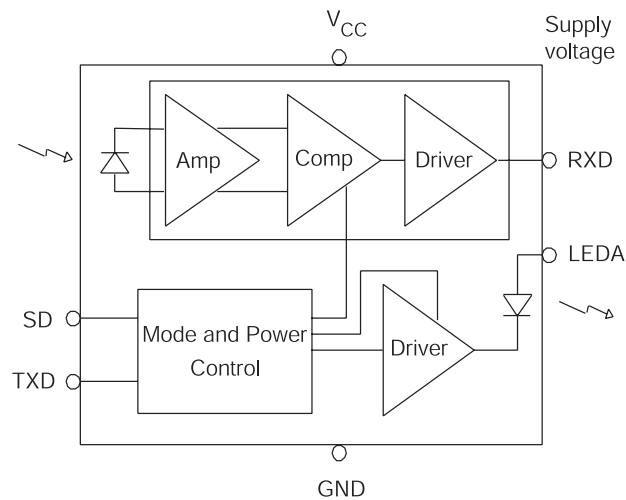

ZHX1810 also features an independently controlled shutdown that minimizes current draw to a maximum of 1  $\mu$ A.

## Features

- Compliant to IrDA Data Specification SIR
- Wide power supply voltage range, 2.4 to 5.5 V
- Minimum link distance, 1 M
- Low-power, listening current, 90  $\mu$ A (typical) at 3.0 V
- Slim form factor (9.1 mm long x 3.8 mm wide x 2.73 mm high)
- Only two external components required
- Extended operating temperature range (–30 °C to +85 °C)
- Meets IEC 825-1 Class 1 Eye Safety Specifications

## Block Diagram

Figure 1 is the block diagram for the Slim SIR transceiver.

**Figure 1. Slim SIR Transceiver Block Diagram**

## Pin Descriptions

The ZHX1810 transceiver uses the pins listed in Table 1. The pins are described in this section.

**Table 1. Pin Out for the ZHX1810 Transceiver**

Pin	Name	Function	I/O
1	LEDA	IRED anode	—
2	TXD	Transmitter input	I
3	RXD	Receiver output	O
4	SD	Enables shutdown mode	I
5	V <sub>CC</sub>	Supply voltage	—
6	GND	Ground	—
—	TAB	Shield ground	—

## **LEDA LED Driver Anode**

(Power)

This output is connected to the LED anode. Current to the LED is sourced through an external resistor.

## **TXD Transmit Data**

(Input, active high)

This CMOS input is used to transmit serial data. This input has an internal pull-down resistor that is disabled (open-circuited) during shutdown.

## **RXD/Receive Data**

(Output, active low)

This output indicates received serial data. It is a tri-state, slew rate controlled CMOS output (tri-stated during shutdown) driver capable of driving a standard CMOS load. No external resistor is required.

## **SD Shutdown**

(Input, active high)

This input is used to place the integrated circuit into shutdown mode. Module shutdown current is influenced by the choice of capacitor used from  $V_{CC}$  to ground.

## **$V_{CC}$ Positive Supply**

(Power)

Connect to positive power supply (2.4–5.5 V). Filter with a 0.33- $\mu$ F ceramic bypass capacitor and terminating resistor as close as possible to the  $V_{CC}$  pin.

## **GND Ground**

(Power)

Connect to ground of the power supply. A solid ground plane is recommended for proper operation.

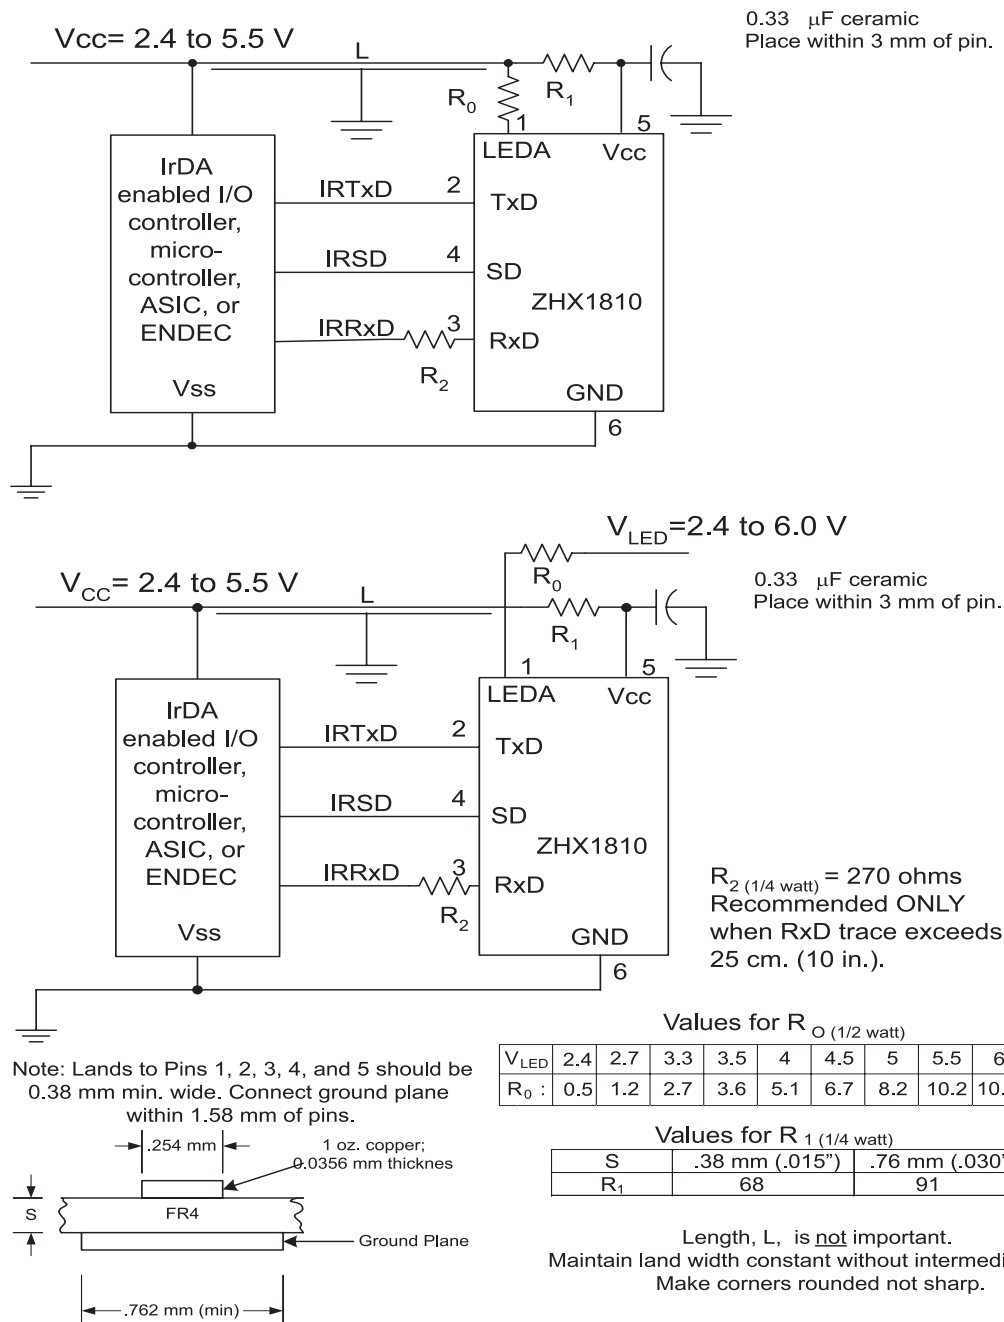

## **TAB**

(Shield)

The Shield tab must be soldered to the ground plane.

## Recommended Application Circuits

Figure 2 shows application block diagrams for the ZHX1810 transceiver.

### Figure 2. Application Block Diagrams

## Electrical and Timing Specifications

Table 2 through Table 4 present the electrical and timing specifications for the ZHX1810 transceiver.

**Table 2. Absolute Maximum Ratings**

Parameter	Symbol	Minimum	Maximum	Unit	Comment
Supply Voltage	$V_{CC}$	-0.3	6.0	V	$V_{CC}$ , GND
Input Voltage	$V_{IN}$	GND-0.3	$V_{CC}+0.3$	V	TXD, SD
Output (External) Voltage	$V_{OUT}$	GND-0.3	$V_{CC}+0.3$	V	RxD
LED Current	$I_{LED}$		700	mA	20% duty cycle, $T_a=25\text{ }^{\circ}\text{C}$ , $t_{ON}\leq 90\text{ }\mu\text{S}$
Storage Temperature	$T_{ST}$	-40	100	$^{\circ}\text{C}$	
Solder Temperature	$T_{SOL}$		240	$^{\circ}\text{C}$	
ESD			1,000	V	

**Table 3. Recommended Operating Conditions**

Parameter	Symbol	Minimum	Maximum	Unit
Supply Voltage	$V_{CC}$	2.4	5.5	V
LED Voltage	$V_{LED}$	2.4	6.0	V
Ambient Operating Temperature	$T_{OP}$	-30	85	$^{\circ}\text{C}$

**Table 4. Electrical Characteristics**

Parameter	Symbol	Condition	Min	Typical	Max	Unit	Remarks
High-Level Input Voltage	$V_{IH}$		$0.6 V_{CC}$		$V_{CC}+0.5$	V	TXD, SD
Low-Level Input Voltage	$V_{IL}$		-0.5		$0.2 V_{CC}$	V	TXD, SD
High-Level Output Voltage	$V_{OH}$		2.2			V	RxD
Low-Level Output Voltage	$V_{OL}$				0.4	V	RxD
Transmitter Current	$I_{LED}$			300		mA	
Listening Current	$I_{CC}$			90	150	$\mu\text{A}$	
Receive Current	$I_{CC}$			90	150	$\mu\text{A}$	

Unless otherwise noted:  $V_{CC}=3.3\text{ V}$ , GND= 0 V,  $T_A= 25\text{ }^{\circ}\text{C}$

**Table 4. Electrical Characteristics (Continued)**

Parameter	Symbol	Condition	Min	Typical	Max	Unit	Remarks
Standby Current	$I_{STB}$				1	$\mu A$	SD= $V_{CC}$ , TxD=0 V
Optical Rise/Fall Time	$t_{Rr}, t_{Rf}$			100		nS	
RxD Pulse Width	$t_{PWA}$	SIR=115.2 Kbps	1.1	1.6	3.9	$\mu S$	
Power Shutdown Time	$T_{SD}$				1	$\mu S$	
Startup Time	$T_{STU}$				200	$\mu S$	
Receiver Latency	$T_L$			100		$\mu s$	
Trans. Radiant Intensity	$I_E$	$I_{LED}=260\text{ mA}$	40		100	mW/sr	$\theta_h$ , $\theta_{v\leq(\pm 15^\circ)}$
Min. Threshold Irradiance	$E_{emin}$	$V_{CC}=3.3\text{ V}$		2	3	$\mu W/cm^2$	$\theta_h$ , $\theta_{v\leq(\pm 15^\circ)}$
Angle of Half Intensity	$\theta$			20		°	Hor. and Vert.
Light Pulse Rise, Fall Time	$t_{or}, t_{of}$			40		nS	
Optical Pulse Width	$t_{OPW}$			20		$\mu S$	TxD="H"
Optical Overshoot	$t_{OPO}$				3	%	
Peak Wavelength	$\lambda_P$			870		nm	

Unless otherwise noted:  $V_{CC}=3.3\text{ V}$ , GND= 0 V,  $T_A= 25\text{ }^\circ\text{C}$

Figure 3 through Figure 6 show various electrical characteristics.

## Mechanical Drawings

In order to achieve the lowest possible costs and lead times, ZiLOG maintains multiple assembly facilities. The mechanical drawings for these transceivers are shown in Figure 7, Figure 8, and Figure 9. These devices, which show minor mechanical differences, are functionally equivalent in every way and meet all ZiLOG and IrDA standards and specifications. All ZHX1810 devices use the identical solder pad layout. Although reels are never mixed, ZiLOG reserves the right to ship from either facility in order to meet delivery requirements. When designing an IrDA subsystem, the user is advised to allow mechanical clearance for all versions of the IrDA transceiver.

**Figure 7. ZHX1810 Mechanical Drawing**

Notes:

Marking can be either embossed  
or using permanent black ink -  
Font - Arial.

SIDE VIEW

PIN	FUNCTION	PIN	FUNCTION
1	LEDA	4	SD
2	TXD	5	VCC
3	RXD	6	GND

## Soldering and Cleaning Recommendations

Follow these recommendations to maintain the performance of the ZHX1810 transceiver.

### Reflow Soldering

- **Note:** Please refer to ZiLOG's Lead-Free Solder Reflow: Packaging Application Note (AN0161, <http://www.zilog.com/docstools.asp>) for more information about the solder profile.

### Manual Soldering

- Use 63/37 or silver solder.
- Use a soldering iron of 25 W or smaller. Adjust the temperature of the soldering iron below 300 °C.
- Finish soldering within 3 seconds.
- Handle only after ZHX1810 has cooled off.

### Cleaning (Preferred)

Perform cleaning after soldering under the following conditions:

- Cleaning agent: Alcohol
- Temperature and time: 30 seconds below 50 °C or 3 minutes below 30 °C
- Ultrasonic cleaning: Below 20 W

Additional cleaning methods can also be used. Please see the [www.zilog.com](http://www.zilog.com) documentation pages for details.

## **Packing, Storage, and Baking Recommendations**

Follow these recommendations to maintain the performance of the ZHX1810 transceiver.

### **Storage**

To avoid moisture absorption, ZHX1810 reels must remain in the original, unopened moisture-proof packing. Parts must be soldered within 72 hours after unpacking. Reels that have been unpacked, but will not be soldered within 72 hours, must be stored in a desiccator.

### **Baking**

Parts that have been stored over 12 months or unpacked over 72 hours must be baked under the following guidelines.

#### **Reels**

60 °C for 48 hours or more

#### **Loose Parts**

- 100 °C for 4 hours or more  
or
- 125 °C for 2 hours or more  
or
- 150 °C for 1 hour or more

## **Moisture-Proof Packing**

In order to avoid moisture absorption during transportation and storage, ZHX1810 reels are packed in aluminum envelopes (see Figure 10) that contain a desiccant with a humidity indicator. While this packaging is an impediment to moisture absorption, it is by no means absolute, and no warranty is implied. The user should store these parts in a controlled environment to prevent moisture entry. Please read the label on the aluminum bag for indicator instructions.

**Figure 10. ZHX1810 Packaging**

## Taping Specifications

Figure 11 shows the reel dimensions for the ZHX1810. Figure 12, Figure 13, and Figure 14 show the tape dimensions and configuration for the ZHX1810.

**Figure 11. ZHX1810 Reel Dimensions (Unit: mm)**

## Dimensions of Tape

(Unit: mm)

## Configuration of Tape

Quantity: 2,000 pcs/reel

## Ordering Information

To order ZHX1810, use ZiLOG part number ZHX1810MV115THTR.

- **Notes:** In order to ensure the lowest possible lead times, ZiLOG uses two different fab sources for the transceiver IC. Both of these ICs have been extensively tested and qualified to meet the ZHX1810 transceiver specifications.

All ZiLOG devices are available lead free. Since 2005, ZHX1810 has been manufactured with lead-free components. When ordering from your ZiLOG distributor, there is a possibility that the parts containing lead might be shipped. To ensure that you receive lead-free devices, please use part number ZHX1810MV115TH2090TR. These devices meet or exceed RoHS Directive 2002/95/EC. For additional information, please see the ZiLOG Quality and Reliability web page at <http://www.zilog.com/quality/index.asp>.

## Customer Feedback Form

If you experience any problems while operating the ZHX1810 transceiver, or if you note any inaccuracies while reading this product specification, please copy and complete this form, then mail or fax it to ZiLOG (see "Return Information," below). We also welcome your suggestions!
